

# 2015 POWER CONTENT LABEL

**This Power Content Label illustrates the type and percentage of electric generation produced by the City of Healdsburg and supplied to our electric customers during the 2015 calendar year.**

Healdsburg's Electric Department owns generation plants throughout Northern California and, through that ownership, about 50% of the energy Healdsburg supplied in 2015 was carbon free. These carbon free generation plants include the geothermal plants at the Geysers, the Calaveras Hydro Project, and hydroelectric power contracts with the Western Area Power Administration (refer to the map on page 3 & 4 for information on generation sites owned by the City of Healdsburg).

Many of the carbon free sources of generation are also considered renewable sources. A renewable resource is one that is naturally replenished on a timescale that allows the resource to be used without depletion or harm to the environment. Large hydroelectric generation facilities are not considered renewable sources by the State of California.

\*"Unspecified Sources of Power" means electricity from transactions that are not traceable to specific generation sources. State numbers are percentages estimated annually by the California Energy Commission based on the electricity sold to California consumers during the previous year.
